Premus

Xstrata-Merafe production capacity utilisation

- Global economic conditions necessitated the following actions by the Venture:
 - 6 furnaces temporarily suspended in November 2008
 - a further 5 furnaces suspended in December 2008
 - 6 further furnaces suspended in January 2009
 - total suspended furnaces 17 (80% of the Venture's annual production capacity)
- Ferrochrome production capacity increased to 30% in the first half of 2009
- Ferrochrome production capacity increased to 60% in July 2009
- Ferrochrome production capacity increased to 85% in September 2009

Update on the power situation (Eskom)

- During the past 18 months, there was a 4% decline in electricity demand
- Electricity demand is rebounding fast with 5% growth expected during 2009 (mainly on alloy restarts) with 2-3% growth expected thereafter
- From Eskom's lows of January/February 2008, Eskom's plant performance has improved, additional maintenance has been done
- All power station coal stockpiles have been replenished, but reserve margins remain low (10% on average and 5% at peak)
- Reserve margins will be under pressure as demand picks up, the reserve margin is currently just above 10%
- With the recent increase in electricity tariffs of 31.3% (effective from 1 July 2009), the electricity prices are now SA36c/kwh (international prices 70c to 80c)
- Electricity prices expected to double within the next three years

Source: Merafe/Macquarie – Lunch with Eskom's CE Generation Brian Dames on 4 September 2009

Costs of electricity continues to be a challenge

- Lion Ferrochrome

The Venture anticipated the changes in the South African electricity tariffs and invested in efficiencies:

Bokamoso – improved energy consumption

Xstrata-Merafe position with regard to the forecast high energy tariffs

4. Financial overview

Key features for the six months ended 30 June 2009

- Revenue down by 49% to R824 million
- Net financing costs down by 96%
- Headline loss of R84 million equating to a loss of 3c per share
- Cash flows from operations of R144 million
- Strong cash balance of R466 million
- Ferrochrome inventory reduced by 42% in the last six months
- Permanent debt of R350 million payable in one instalment at 31 December 2012

Summary of cash flows for the six months to 30 June 2009

	<u>R'm</u>
Opening cash balance 1 January 2009	540
Cash flows after interest from operations	142*
Taxation paid (accrual 31 Dec 2008)	(88)
Capital expenditure	(84)
Forex loss on US\$ cash held	(44)
Closing cash balance 30 June 2009	466

* After accounting for R116 million of standing charges

Financial performance over the last three years (cont.)

Net (debt) / cash position

Working capital requirements in second half of 2009

- Expect cash to be “locked-up” in working capital for the remainder of 2009
- This is due to the ramp-up in ferrochrome production
- Typical working capital cycle 5-6 months

- Merafe has sufficient cash and banking facilities to manage this cycle

Production costs

- Despite improved efficiencies, **production costs** continue to be a challenge
- Looking forward at production costs Merafe sees:
 - **electricity prices** increasing by an announced 31.3% from 1 July 2009
 - reduced **inflation**
 - dollar denominated costs such as **shipping and reductants** reducing owing to the stronger Rand
 - higher absorption of **fixed costs**, thereby reducing overall costs

Substantial rises in Chinese stainless production from end-2008 lows

Source: CSSC, Macquarie Research, September 2009

Points of caution

Some of the immediate concerns to the Company are as follows:

- Risk of ferrochrome producers ramping up too quickly and possibly oversupplying the market
- Over reliance on Chinese stainless steel production with the rest of the world recovering slowly
 - stainless orders in Europe are being driven by restocking and not real demand
- Short pull back in Chinese stainless steel production is currently being experienced mainly due to:
 - the rapid growth in stainless steel production which has outpaced the demand recovery leading to an over build of stainless steel inventory
 - Chinese holidays
- Power constraints on SA ferrochrome producers both for ramping up this year and also for future expansions (the 10% restriction imposed in 2008, is still applicable)
- Industrial action
- Ferrochrome price – still “soft”
- Strengthening Rand
- Chrome ore exports

Barriers to entry

Low barriers to entry in South Africa, a thing of the past:

Pre 2008

- Capital cost of building smelters up by over 500%
- Long lead time for critical items needed for construction
- Shortage of available quality ore reserves
- Shortage of artisans and skilled labour

Post 2008

- Escalating production costs
- Access to funding (debt and equity markets)
- Power supply – when will power be available for new projects?

MERAFE
RESOURCES

5. Outlook

Outlook

- Recovery of global stainless steel production likely to continue
- Stainless steel production for 2010 estimated at 28.7 million tonnes, a 13.8% increase y-o-y
- Demand mainly from Asia with Europe still restocking
- Global ferrochrome stockpiles have reduced
- Ferrochrome inventory levels have normalised (currently below normal)
- Venture's ferrochrome order book full until end 2009

Outlook (cont.)

- 16% increase in European benchmark ferrochrome price in Q4'09 to \$1.03
- Size and flexibility of the Venture provide an advantage
- Venture's retention of its skilled labour force has proved very beneficial
- Venture has increased production to 85% of annual operating capacity
- Merafe well positioned to deliver into growth
- Strong balance sheet with cash on hand at 30 June 2009 of R466 million
